

Config file for use external tool **prefixr.com** with gedit:

1) Enable gedit's **external tools**

2) place the file in ~/.gnome2/gedit/tools

3) the code is

```
#!/bin/sh
# [Gedit Tool]
# Name=Prefixr
# Shortcut=quotedbl
# Applicability=all
# Output=replace-selection
# Input=selection-document
# Save-files=nothing

var=$(cat /dev/stdin)
curl -sSd "css=$var" "http://prefixr.com/api/index.php"
```
